1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-13 and 24, drawn to apparatus, classified in class 324, subclass 158.1.

Page 2

- II. Claims 14-18, drawn to a test system, classified in class 324, subclass 765.
- III. Claims 20-23, drawn to method, classified in class 324, subclass 765.

## 2. The inventions are distinct, each from the other because:

Inventions I and II in a *first set* and III in a *second set* are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the apparatus, as described in claim 1, can be utilized by a method that does not require the step of "supplying test data signal from a tester to be distributed from a tester channel to one of a plurality of probes configured to connect to test pads on an integrated circuit," and the apparatus, as described in claim 14, can be utilized by a method that does not require the step of "controlling delay through the isolation buffers so that each isolation buffer provides substantially the same delay."

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2)

Art Unit: 2829

that the subcombination has utility by itself or in other combinations (MPEP §

Page 3

806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because the combination does not require

a tester having test channels as required in claim 14. The subcombination has separate

utility such as by itself and for its intended purpose.

3. Because these inventions are distinct for the reasons given above and have

acquired a separate status in the art because of their recognized divergent subject

matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must

include an election of the invention to be examined even though the requirement be

traversed (37 CFR 1.143).

5. A telephone call was made to the Office of the Attorney of Record on August 8,

2005 to request an oral election to the above restriction requirement, but did not result

in an election being made.
